

Product Math

Factoring a product from requirements, assets, skill, effort, and time.

TOUCHPOINTS

Let's break it down

**A product is the
result of multiplication**

In math, a product is the result of multiplication; an expression that identifies variables to be multiplied, called factors.

Factors involved in developing a software product

Designers

Developers

Product Managers

Product Owners

Researchers

Obviously

**Quality is hard to
measure.**

Do it anyway.

A question to ponder

What factors have the most impact on your product?

Thanks * Each of you
